Case studies

A powerful response to a plant crisis saves client USD 20m

SITUATION

A major fire at an electricity generation plant in Thailand left a 14 percent deficit in the nation's power capacity. The financial costs were potentially enormous.

SCENARIO

Our adjusting team moved quickly, taking control of the loss mitigation process and using temporary repairs and local labour to recover 85 percent of power within 30 days.

OUTCOME

From there, our multi-skilled on-site loss team working with the insured in the management of the repair project to completion, achieving a mitigation saving of USD 20m against the initial budget.

Ensuring the calm after the storm ... and a litigation-free settlement

SITUATION

When 72mm of rain fell in just 90 minutes on a solar evaporation minerals extraction facility in the Middle East, the resulting flood damage was severe.

SCENARIO

Our loss team responded rapidly, ordering a day-of-loss aerial survey to provide a comprehensive overview of the loss and the work needed. Surveyors, engineers and forensic accountants were quickly contracted to quantify the damage alongside their counterparts for the insured, with as many as 30 McLarens contractors on site at one time.

OUTCOME

The result was a litigation-free settlement, reduced by over USD 8m against the original loss estimate.
